

or adobe footings and walls; filled wells or privies; and deposits of metal, glass, and/or ceramic refuse. If any find is determined to be significant, the project proponent and a qualified archaeologist will meet to determine the appropriate avoidance measures or other appropriate mitigation.

Human Remains

In the unlikely event that human remains were discovered during subsurface activities, including those interred outside of formal cemeteries, the human remains could be inadvertently damaged, which could be a significant impact. However, this impact would be minimized by implementation of Mitigation Measure 3, in conjunction with Mitigation Measures 1 and 2.

Measure 5.6-3: The possibility of encountering human remains cannot be entirely discounted. Section 7050.5 of the California Health and Safety Code states that it is a misdemeanor to knowingly disturb a human grave. If human graves are encountered, work should halt in the vicinity and the County Coroner should be notified. At the same time, an archaeologist should be contacted to evaluate the situation. If the remains are determined to be of Native American descent, the Native American Heritage Commission (NAHC) shall be contacted within a reasonable timeframe. The NAHC will then identify the person(s) thought to be the Most Likely Descendent (MLD) of the deceased Native American. The MLD shall then make recommendations, and engage in consultations concerning the treatment of the remains as provided in PRC§ 5097.98.

5.7 Socioeconomic Conditions

The following Mitigations are recommended for Alternatives A, B, C and D:

Problem Gambling

Mitigation Measure 5.7-1:

- The Tribe will adopt a policy statement on problem gambling.
- The Tribe will contract with a gambling treatment professional to train management and staff to develop strategies for recognizing and addressing customers whose gambling behavior may strongly suggest they may be experiencing serious to severe difficulties.
- The Tribe shall refuse service to any customer whose gambling behavior convincingly exhibits indications of problem or pathological gambling.
- The Tribe shall respectively and confidentially provide the customer (as described above) with written information that includes a list of professional gambling treatment programs and self-help groups.
- The Tribe shall prominently display materials describing the risks and signs of problem and pathological gambling behaviors. Materials shall also be prominently displayed that provide information on available programs for those seeking treatment for problem and pathological gambling disorders.

- The Tribe shall implement procedures to allow for voluntary self-exclusion, enabling gamblers to ban themselves from a gambling establishment for a specific period of time.
- The Tribe will enter into an agreement with Sonoma County for an annual contribution from the Tribe to local organizations that address problem gamblers in Sonoma County. Based on the previous calculation of the expected increase in problem gamblers in Sonoma County and trends in treatment of problem gamblers, the Tribe would compensate the county social services for a minimum of equivalent to 1.4 licensed counselor positions. If the County does not have a mechanism to provide these services then the Tribe shall contribute an equivalent amount to problem gambling treatment and prevention programs which serve Sonoma County.

5.8 Transportation

It is recommended that the Tribe pay a full share or fair share for implementation of the following improvements. In cases where improvements would require an environmental study and design, the full share or fair share contribution shall also apply to the environmental study. A summary table of mitigation measures is provided as **Table 5-1**. The table summarizes the mitigation measures required for each alternative and the residual significance after mitigation which are discussed in detail below.

The following measures are recommended to mitigate project impacts under 2015 short-term conditions and/or cumulative conditions, as described in **Sections 4.8 and 4.16**, respectively:

Measure 5.8-1: (Alternatives A and B for near term and cumulative, Alternative C for cumulative only). The project sponsor would pay 100% of the costs to install traffic signals at one central main entrance to the project site on Asti Road, and to construct a northbound right-turn lane and southbound left-turn lane on Asti Road at the site entrance. Supplementary driveways to the north and south of this signalized access would be configured to limit access to right-turn in/right-turn out only.

Implementation of Mitigation Measure 5.8-1 would result in acceptable levels of service at the intersection of Asti Road / Project Access.

Measure 5.8-2: (All Project Alternatives for near term and cumulative). The project sponsor would pay their fair share contribution towards the installation of traffic signals at the intersection of U.S. 101 Northbound Ramps / South Interchange.

Implementation of Mitigation Measure 5.8-2 would result in acceptable levels of service at the intersection of U.S. 101 Northbound Ramps / South Interchange in the near-term, but associated queuing between the U.S. 101 northbound ramps and Asti Road, and between the northbound and southbound ramps, would exceed storage capacity. Road widening to incorporate additional turn lanes would be infeasible because it would require widening of the overpass structure over U.S. 101. In the cumulative scenario, Mitigation Measure 5.8-2 would not result in acceptable levels of service at this intersection. For acceptable traffic LOS and/or no excessive queuing, construction of a dual-lane roundabout with a 160-foot diameter is recommended instead of installation of traffic signals (see Mitigation Measure 5.8-4). The proximity of the intersection of U.S. 101 Northbound Ramps / South Interchange to the Asti Road / South Interchange intersection dictates consolidation of the two intersections into a single roundabout.
